

Horizontal Prototypes

CPSC 481 - T04 Group 1

Manraj, Usharab, Rian, Lucas, Esohe

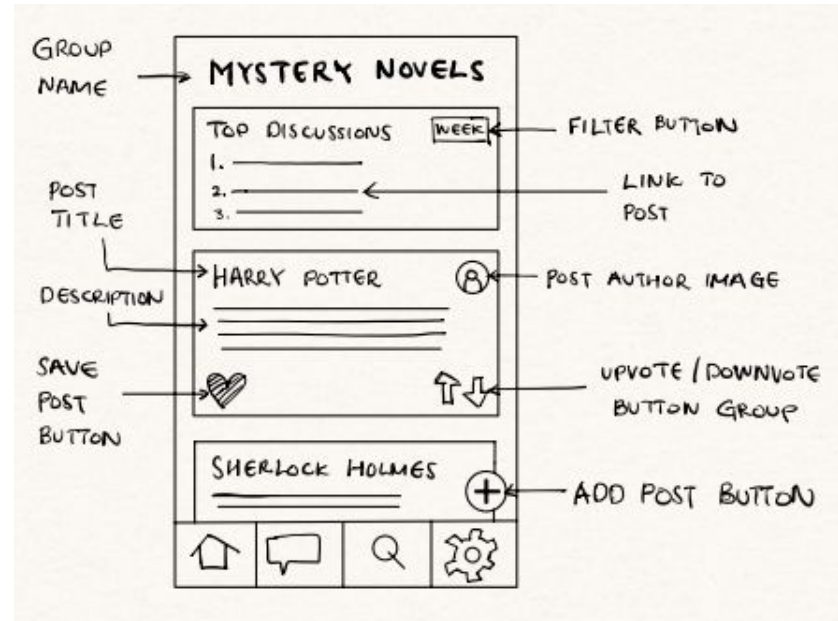

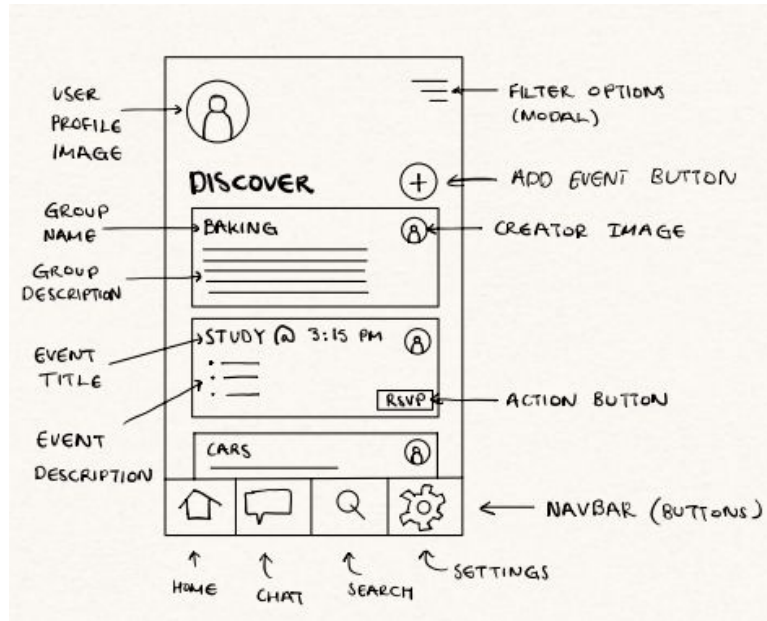

A dark blue diagonal gradient bar that starts from the bottom left corner and extends towards the top right corner, covering the lower half of the slide.

Recap

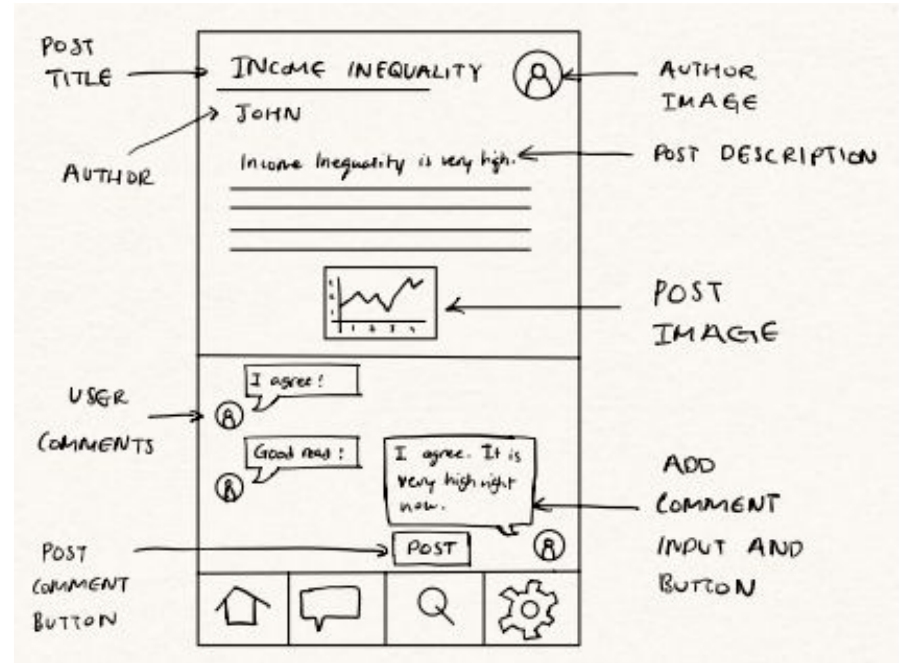

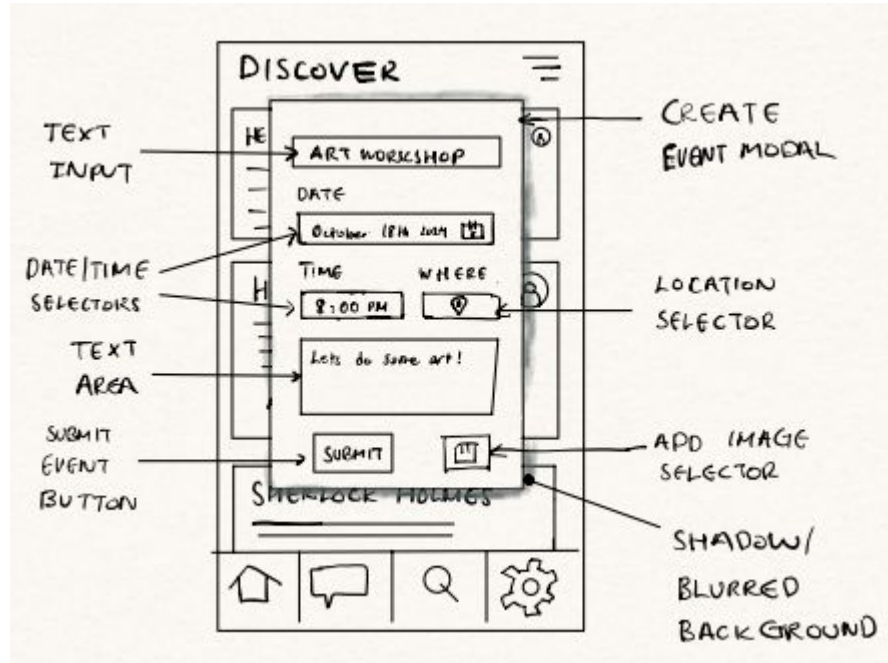

- Our organization is the University of Calgary
- We want to create an engaging learning environment, and creating a positive social environment is the first step.
- University students currently resort to multiple platforms for discussions and finding out about events.
- Let's create a centralized system for that!

Recap – Lo-fi Prototypes

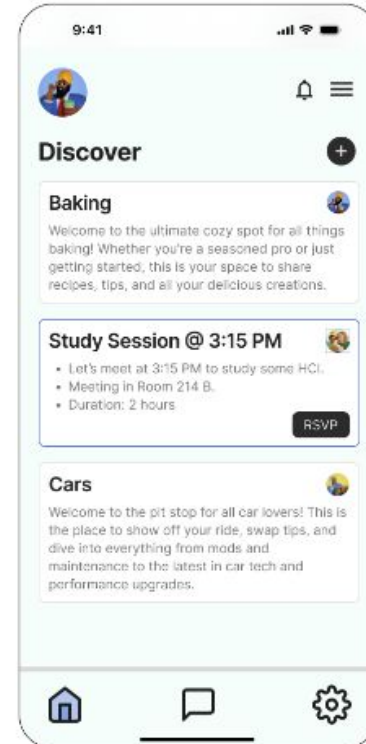

Recap – Lo-fi Prototypes Continued

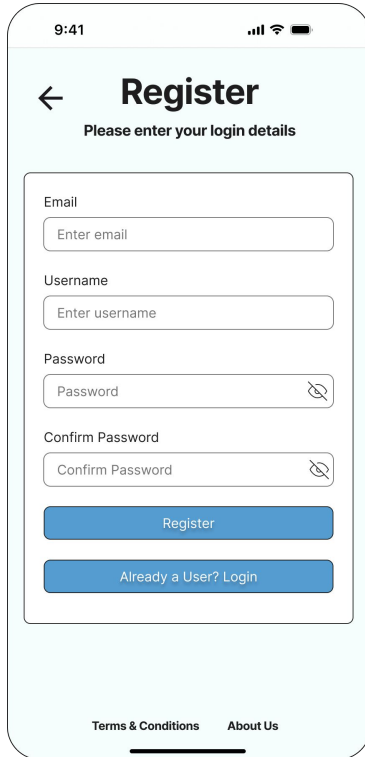

Lessons Learned

- Clarified core features and user needs
 - We were able to remove some pages/buttons
 - Added a notifications page
- Identified some usability issues
 - Terminology clarifications between “Threads” and “Groups”
 - Clearly differentiate between items in the main page

User Flow

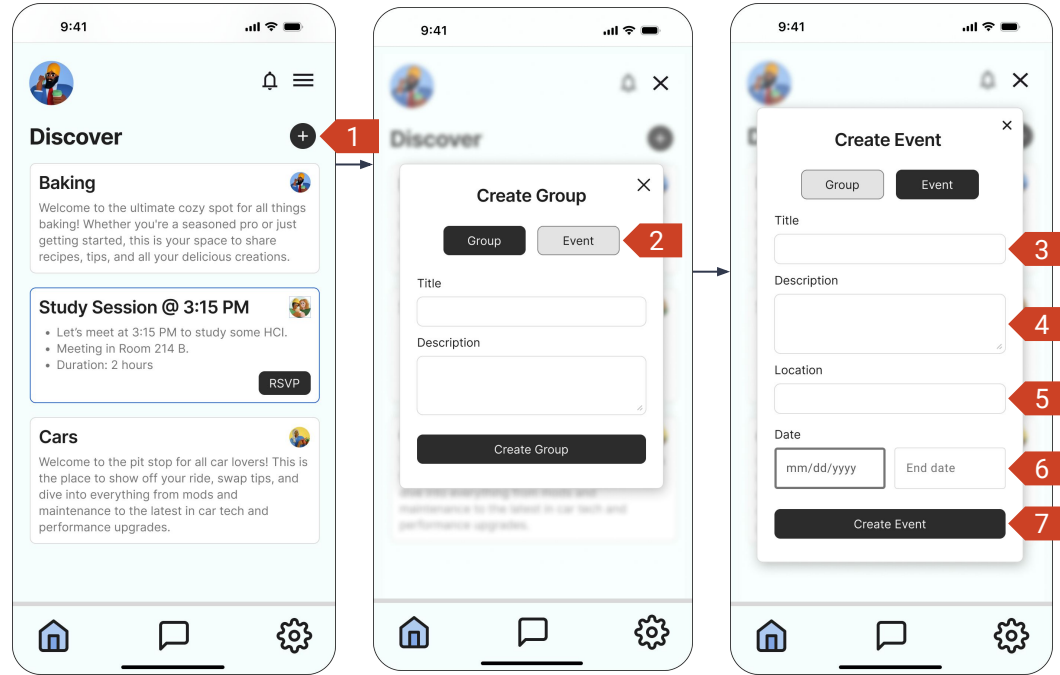

Creating a Group

- Click on the button with the plus symbol to bring up the create group/event modal
- By default the modal should already be on the group creation modal
- Fill in the required fields which include the Title and Description
- Confirm the creation of the group by clicking on the “Create Group” button

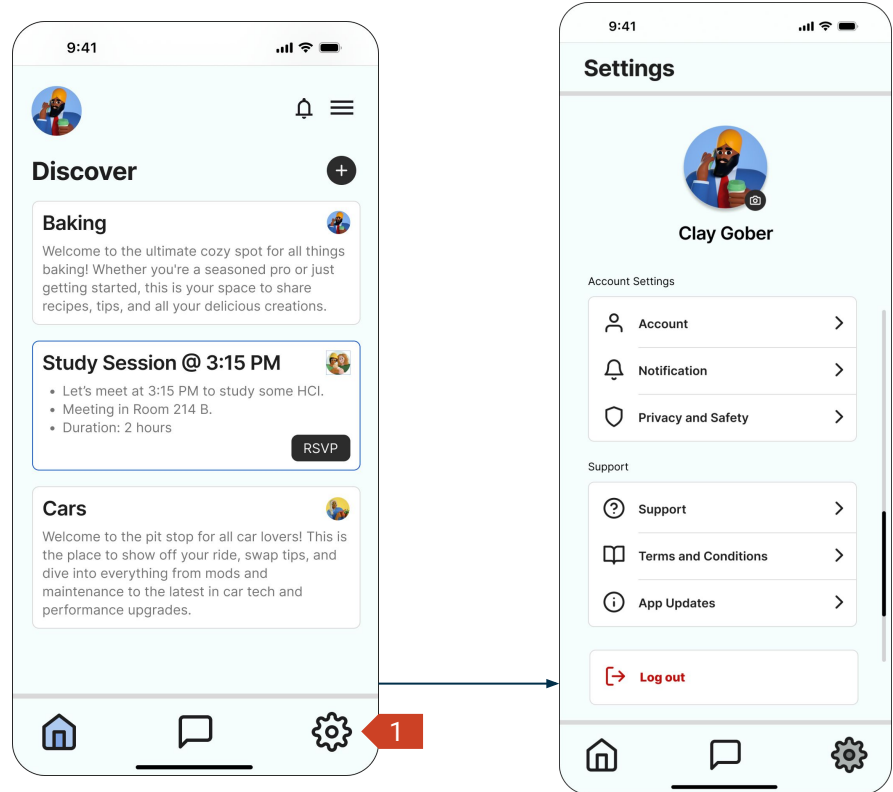

Creating an Event

- Click on the button with the plus symbol to bring up the create group/event modal
- Click on the button labelled “Event” to switch the modal for event creation
- Fill in the required fields which includes the Title, Description, Location and the Date of the event
- Confirm by clicking on the “Create Event” button

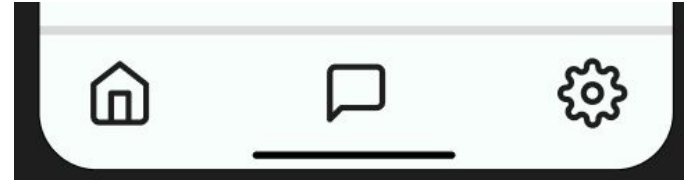

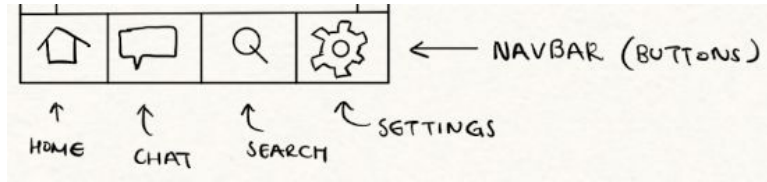

Navigating to Settings

- Clicking on the tab below with the gear icon will simply direct you to the settings page

Discussion

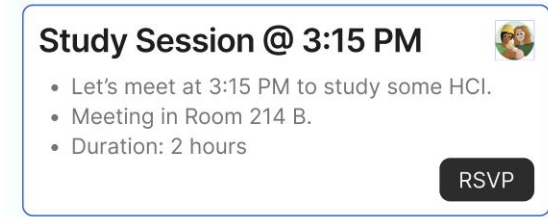

One of our more notable changes was removing the search/magnifying icon from the bottom navigation bar. The following screenshots highlight this change from the low-fidelity to medium-fidelity prototype:

The main reason for this change was that we identified that a user does not need a separate page for searching/filtering through groups and events on the Discover page. This functionality was also duplicated in the low-fidelity prototypes for the Discover page, therefore the search icon was redundant.

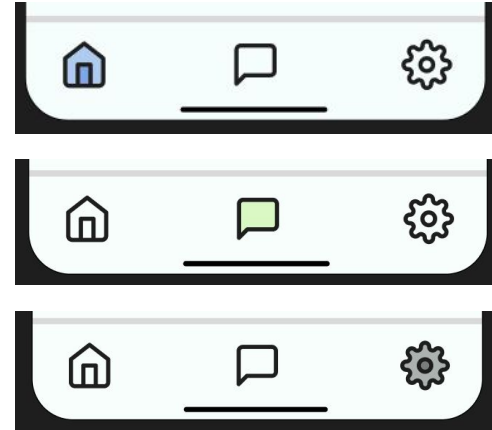

Discussion

Another subtle change we added in the medium-fidelity prototypes was blue highlighting/bordering around events in the Discover page to differentiate between groups and events. The following screenshot displays this change:

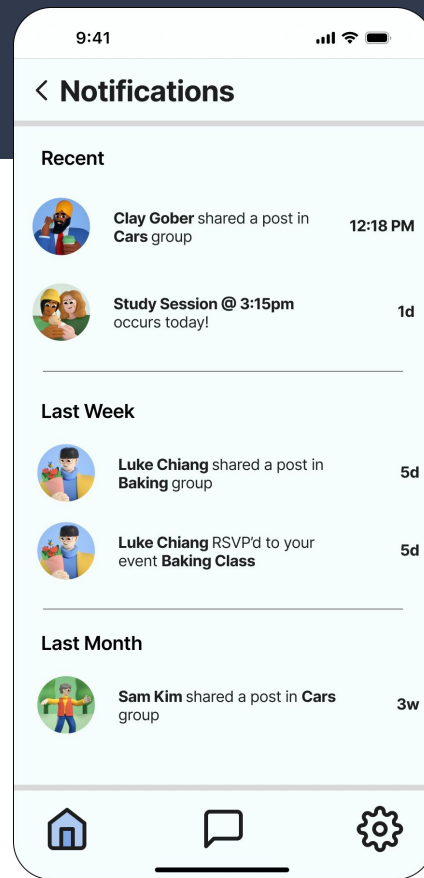

To follow a similar pattern to the change mentioned previously, we added icon highlighting to the navigation menu icons to display the active page.

The following screenshots display this:

Discussion

We also added a notifications page to allow users to see important information or updates on their posts or events. This can be accessed from a notification bell icon on the discover page.
